Profile

Full-Stack Software Engineer with production experience shipping enterprise applications end to end – REST APIs and relational data models on Java, Spring Boot, Hibernate/JPA and PostgreSQL, paired with React, TypeScript and component-driven front ends. Designs schema-driven JSONB data models, JWT and role-based access control, asynchronous worker pipelines, and the interfaces that consume them. Owns features across the full stack – schema design, API, UI, Docker-based deployment on AWS and DigitalOcean through Jenkins CI/CD and GitLab merge-request workflows, and post-release defect resolution.

Experience

- **Software Development Engineer** at EMGAGE *July 2026 – Present*
 - Deliver features end to end on a production HRMS platform – PostgreSQL schema design, Spring Boot REST APIs, and the React interfaces that consume them.
 - Built the Job Description and Job Opening module end to end – data model, Spring Boot REST APIs, and the React screens for creating, publishing and managing openings.
 - Shipped passkey (WebAuthn/FIDO2) passwordless login into the production application, covering credential registration, challenge–response verification and login session handling.
 - Built mobile application home-screen widgets backed by dedicated REST endpoints, surfacing live data to users without opening the app.
 - Design and implement RESTful APIs on a layered controller–service–repository architecture with DTO validation, transactional service boundaries and centralized exception handling.
 - Own 3–4 production modules across frontend and backend as the single point of accountability for their defects and releases, deploying on AWS through Jenkins CI/CD pipelines and GitLab merge-request workflows.
 - Diagnose production incidents from application logs and stack traces to root cause, and ship targeted fixes within release timelines.
- **Full-Stack Developer Intern** at EMGAGE *Sept 2025 – June 2026*
 - Built full-stack modules on Spring Boot and React for a production enterprise platform, covering Hibernate entity mapping, REST endpoints and the connected UI screens.
 - Rebuilt the internal portal interface end to end with a new glassmorphism-based design system, migrating every module to a shared, reusable React component library.
 - Tuned front-end performance across the redesigned modules through component-level rendering optimization, asset loading and reduced redundant API calls.
 - Implemented CI/CD pipelines using Jenkins for automated build, testing, and deployment workflows.
- **MERN Stack Intern (Summer Internship)** at Brainybeam Info-Tech Pvt. Ltd. *May 2025 – June 2025*
 - Developed features for live MERN applications using MongoDB, Express.js, React.js and Node.js.
 - Built reusable React components, wired them to backend REST APIs, and debugged defects through Git branching in an Agile team.

Technical Skills

- **Frontend:** React.js, Next.js, TypeScript, JavaScript (ES6+), HTML, CSS, Tailwind CSS, Material UI, Redux
- **Backend:** Java, Spring Boot, Spring Data JPA, Spring Security, Hibernate, RESTful API Design, JWT, Node.js, Express.js
- **Databases:** PostgreSQL (JSONB, Indexing), MongoDB, SQL, Redis, Flyway Migrations, Firebase
- **Languages:** Java, JavaScript, TypeScript, SQL, Python
- **Tools & DevOps:** Git, GitHub, GitLab, Jenkins, Docker, Maven, Linux, Bash, AWS (EC2, S3), DigitalOcean, Cloudflare, Vercel, Postman
- **Other:** Data Structures and Algorithms, System Design, CI/CD Pipelines, Unit & Integration Testing (JUnit, Testcontainers), Agile/Scrum

Projects

1. Selfheal – Autonomous Production Error Resolution Platform

- Built a Spring Boot 3.5 / Java 21 platform that ingests production crash reports over IMAP, parses stack traces into structured errors, and drives an AI agent pipeline that opens a reviewed merge request for the fix.
- Designed a 40-table PostgreSQL schema managed through 12 Flyway migrations, using JSONB policy configuration, generated TSVECTOR columns and GIN/B-tree indexes for full-text error search.

- Implemented hybrid SHA-256 fingerprinting – a release-agnostic hash plus a line-exact hash – to deduplicate recurring crashes, track per-release variants and auto-flag regressions.
- Orchestrated a multi-stage agent pipeline (investigator → fixer → build gate → adversarial reviewer) with validated JSON contracts, bounded retries, and path and change-size guards enforced before any commit.
- Integrated GitLab REST APIs for branch creation, commit, merge-request publishing and webhook-driven state sync, isolating every run in a dedicated git worktree.
- Secured the platform with Spring Security, JWT access/refresh tokens, role-permission RBAC and AES-encrypted credential storage, covered by JUnit 5 and Testcontainers integration tests.
- **Tech Stack:** Java 21, Spring Boot 3.5, Spring Security, Hibernate/JPA, PostgreSQL (JSONB), Flyway, Docker, React 19, TypeScript :- [GitHub Repo](#)

2. InterviewReady – AI Interview Platform

- Developed an AI interview simulator with speech-to-text answer capture, webcam recording and per-question scoring feedback generated through the Gemini API.
- Built a resume builder, career chatbot and performance analytics dashboards on a React and TypeScript front end.
- Modeled interview sessions, questions and feedback in Firebase with authentication and rule-based document access control.
- **Tech Stack:** React.js, Tailwind, TypeScript, Firebase, Gemini API :- [GitHub Repo](#)

3. Wire2Web – AI Wireframe to Code Converter

- Built a Next.js 15 platform converting uploaded wireframes into working React and Tailwind code through a provider abstraction over OpenAI, Gemini and Llama models.
- Implemented streamed code generation with live preview, versioned design storage and export, backed by Drizzle ORM and Firebase authentication.
- **Tech Stack:** Next.js 15, React 18, Tailwind CSS, Firebase, Drizzle ORM :- [GitHub Repo](#)

Education

- **A.D. Patel Institute of Technology**, B.Tech in Information Technology (CGPA: 8.49) 2022 – 2026 – Anand, Gujarat
- **Nalanda Vidhyalaya - 2**, HSC (Grade: A2, Percentile: 97.04) 2022 – Surat, Gujarat
- **Nalanda Vidhyalaya - 2**, SSC (Grade: A2, Percentile: 98.43) 2020 – Surat, Gujarat

Freelance Projects

1. Farmzy – Multi-Vendor Event & Service Booking System

- Built a multi-vendor booking platform for event services (venues, photography, DJ) supporting multi-service bookings in a single checkout flow, delivered as a React web app and a React Native mobile client.
- Developed a modular Spring Boot backend of 16 REST controllers over 34 JPA entities, versioned through 35 Flyway migrations and documented with OpenAPI/Swagger.
- Implemented a schema-driven architecture where dynamic forms, filters and listings are generated from backend-defined JSON schemas, with attributes modeled in PostgreSQL JSONB to avoid rigid per-category schemas.
- Built role-based workflows with JWT authentication – vendor listing submission, an admin approval pipeline (Draft → Pending → Approved) and a parent-child booking model for multi-vendor transactions with availability validation.
- Added Redis caching and Bucket4j rate limiting, Resilience4j fault tolerance, Razorpay payments, Cloudinary/S3 media storage, and Sentry with Micrometer/Prometheus for production monitoring.
- **Tech Stack:** Java, Spring Boot, PostgreSQL (JSONB), Redis, Docker, React, React Native, GitHub Actions, DigitalOcean, Cloudflare, Vercel :- [Live Project](#)

2. FireFighter E-Commerce Platform (MERN Stack)

- Delivered a multi-role e-commerce system for a live client with separate Admin, Vendor and User panels.
- Implemented JWT-based authentication and authorization, product and inventory management, and the order lifecycle across role-scoped dashboards, with Razorpay payments and transaction status handling.
- **Tech Stack:** MongoDB, Express.js, React.js, Node.js, Razorpay

3. Catering Business Website (Next.js + CMS)

- Built an SEO-optimized Next.js site with server-side rendering and Sanity CMS, letting the client publish content without developer involvement, and configured domain, DNS and production deployment on Hostinger.
- **Tech Stack:** Next.js, Sanity CMS, JavaScript, Hostinger :- [Live Project](#)
